concept Lesson 1 AI-Native

Understanding Stakeholder Identification in AI Projects

Concept Snapshot

Identifying stakeholders in AI projects is crucial for ensuring alignment and successful outcomes. Key stakeholders in corporate communications include content creators, legal teams, IT departments, and executive leadership. Each group has unique interests and concerns, such as compliance, technical feasibility, and strategic alignment. Understanding these perspectives helps AI Content Editors tailor AI solutions to meet organizational goals effectively.

AI Strategy

Use AI to map out stakeholder interests and concerns by analyzing communication patterns and historical project data. Delegate the task of identifying potential stakeholders and their past interactions to AI tools, while humans should validate AI's findings and engage with stakeholders to understand their needs deeply.

DELEGATE TO AI

- Analyzing large volumes of communication data to identify key stakeholders.

KEEP HUMAN

- Validating AI-generated stakeholder lists.
- Engaging with stakeholders qualitative insights.

AI Mentor

→ Summarizing stakeholder interests and historical project involvement.

Try this prompt:

```
Analyze the email communication logs and meeting notes to identify
key stakeholders in our upcoming AI-driven content strategy project.
Summarize their roles and previous project contributions.
```

Run in ChatGPT | Copy

Prompt Template

Identify key stakeholders in the **{{project_name}}** by analyzing **{{data_source}}**. Summarize their roles and interests in relation to **{{project_goal}}**.

Test in Prompt Lab

EXPECTED OUTPUT

A list of stakeholders with their roles and interests.

Show placeholder guide (3)

Code Examples

This code reads a CSV file containing communication logs and uses Pandas to group messages by sender. It then sorts the senders by the number of messages sent, helping to identify key stakeholders based on communication frequency.

Analyzing Communication Logs with Pandas python

Run

```python
# Import necessary libraries
import pandas as pd

# Load the communication logs into a DataFrame
logs = pd.read_csv('communication_logs.csv')

# Group by sender to identify potential stakeholders
stakeholders = logs.groupby('sender').size().reset_index(name='message_count

# Sort stakeholders by the number of messages sent
stakeholders_sorted = stakeholders.sort_values(by='message_count', ascending=

# Display the top stakeholders
print(stakeholders_sorted.head())
```

OUTPUT

```

```

This code creates a DataFrame of stakeholders with their roles and interests, then defines a function to summarize these details. The output is a list of sentences describing each stakeholder's role and interest.

Summarizing Stakeholder Roles python Run

```python
# Assume we have a DataFrame 'stakeholders' with roles and interests
stakeholders = pd.DataFrame({
    'name': ['Alice', 'Bob', 'Charlie'],
    'role': ['Content Creator', 'Legal Advisor', 'IT Specialist'],
    'interest': ['Content personalization', 'Compliance', 'Technical feasibi
})

# Function to summarize stakeholder roles
def summarize_stakeholders(df):
    summary = []
    for index, row in df.iterrows():
        summary.append(f"{row['name']} is a {row['role']} interested in {row
    return summary

# Generate the summary
stakeholder_summary = summarize_stakeholders(stakeholders)

# Print the summary
for line in stakeholder_summary:
    print(line)
```

Implementation Task

Stakeholder Identification for AI Content Strategy

Use AI to identify and summarize key stakeholders for an AI-driven content strategy project in corporate communications.

REQUIREMENTS

1. Analyze communication logs to identify stakeholders.
2. Summarize their roles and interests.

TOOLS NEEDED

Python Free | Pandas Free

DELIVERABLE

A report listing stakeholders with their roles and interests.

YOUR WORKFLOW

- Review Assignment
- 2 Get AI Mentor Briefing — Ask AI Mentor
  Your mentor will prepare a plan and open your workspace
- Submit & Get Graded
  Upload your required artifacts for AI grading

Reflection

1. How did your prompt evolve during the task?
2. What did AI get wrong in identifying stakeholders?
3. What aspects of stakeholder identification would you not delegate to AI?

Knowledge Check

1/5

Which of the following is NOT typically a stakeholder in AI projects within corporate communications?

Content Creators

Legal Teams

IT Departments

Retail Customers

React: 👍 Helpful 💡 Interesting 🤯 Mind Blown 😕 Confused
